

Super Dispatch Integrations Guide

Unlock the full potential of Super Dispatch by integrating it with your systems to streamline and automate workflows. Here's a high-level overview of integration options, designed to help you start envisioning the automation possibilities for your operations.

Integrate TO Super Dispatch via API

Automate order management and reduce manual entry by connecting your systems (e.g., External TMS, CRM, or proprietary software) with Super Dispatch. With a custom API integration, you can:

- Create Orders – Instantly add new orders into Super Dispatch.
- Update Order Info – Ensure order details remain current.
- Send Direct Offers – Push direct offers seamlessly.
- Post to Super Loadboard – Automatically post orders to the Super Loadboard.
- Manage Terminals/Customers – Create and update customer and terminal information.
- Carrier Management – Adjust carrier statuses and keep records updated.

Integrate FROM Super Dispatch via API

Keep your CRM or internal software synchronized with Super Dispatch data by pulling key information:

- Order Information – Keep order fields up to date in real-time.
- Status Updates – Receive live updates (e.g., “picked up” or “delivered”).
- Dispatch Sheet/BOL – Access links to documents such as dispatch sheets and eBOLs.
- Carrier Information – Automatically receive details on carriers handling orders.

No Developer? No Problem! Use Zapier for Integrations

If you don't have a development team, Zapier enables easy, no-code automation options, such as:

- **QuickBooks** – Reduce manual data entry by automating: Invoice Creation (Customer) & Bill Creation (Carrier)
- **Notifications & Communications** – Automate alerts to keep your team and clients informed: Slack/Teams & Gmail
- **Order Creation** – Use spreadsheets for order input: Google Sheets & Excel Online
- **Basic CRM Integration** – Connect to auto transport CRMs to streamline operations.

Pricing Insights API Integration

Enhance your pricing strategy with Super Dispatch's Pricing Insights API, an intelligent tool powered by machine learning and AI to drive competitive, data-informed decisions.

- Access real-time, load-specific pricing data to quote customers quickly and accurately.
- Integrate directly into your quoting system for seamless access to recommended carrier rates.
